

Amazon Kindle

Be sure to save the ebook to your computer before completing the directions below. Directions below are copied from Amazon Customer Support information.

Connecting your Kindle device to your computer

Plug the larger end of a USB cable into an available USB port or a powered USB hub connected to your computer, and connect the other end of the USB cable to the micro-USB port on the bottom of your device.

When connected to your computer, your Kindle device will go into USB drive mode. Your wireless service is temporarily shut off and you will not receive any of your subscriptions while in this mode.

Once connected, your Kindle device will appear in the same location as external USB drives usually appear. For Windows users, this is typically in the "Computer" or "My Computer" menu. For Mac users, the drive will appear on the desktop.

Transferring personal documents to your Kindle

Open the Kindle drive. You will see several folders inside, one of which will be named "documents." This is the folder you will move the downloaded file into.

1. Locate the downloaded file and copy it into the documents folder. You can generally copy files by clicking and dragging the file to the folder.
2. Safely eject your Kindle device from the computer and unplug the USB cable. Your content will appear on the Home screen, or on a Kindle Fire, tap Docs from the Home screen to open your Docs content library.
